HOLDX Manager

With the HOLDX Manager, important data of individual HOLDX devices can be read out easily and conveniently. Selected data and information are clearly visualized and allow the operator to get a clear overview of the system and the status of the devices. Among other things, data such as firmware version, device name, number of door openings, etc. are displayed. In addition, the magnet can be started and stopped with the assigned password.

Only a Bluetooth connection with the target device is necessary. The app runs on common operating systems like Windows and as a mobile app on iOs systems and Android systems.
