## Simplifier Monitor SRM

You have the option to access the online mode with the Simplifier Monitor Stick (SRM – Simplifier Radio Monitor) either wirelessly or via a USB interface, thereby activating the integrated diagnostic function. The unique online mode via the wireless interface significantly simplifies programming and substantially reduces the commissioning time of the Safety Simplifier.

Programming and uploading the application software

Program your application software with the Simplifier Manager. With the SRM Stick, you can upload the application software to all participants. A cable connection to the Safety Simplifier is not necessary. If you don't have the SRM Stick on hand, you can also use a standard USB micro cable for all functions. All safety-relevant data, such as device serial numbers, checksum, network ID, wireless channel, and quality, are displayed.

### General data

Item number	1019521
Item number (old)	SP-N-88-850-03
Type designation	Simplifier SRM
