we simplify safety

Simplifier Manager

Program safety functions easily and clearly with the help of the Simplifier Manager software. Function modules for emergency stop, safety switches, lighting curtains, two-hand controls, operating mode switches and many other applications are available as standard.

The function blocks can be found on the left side, Downloads "Software Gateway"

Free Software Simplifier Manager

Clear program structures

Predefined logic and function blocks as well as drag & drop functions simplify programming.

Function blocks for communication with the standard PLC via free software gateways.

Configuration of function blocks

Predefined function blocks and drag & drop functions reduce the programming time and simplify the structure of your application. The properties of the individual function blocks can be configured in the inspector window. Exemplary parameters:

- single- oder two channel monitoring

- Filterzeiten
- Times of simultaneity
- Activation of error output
