

A large industrial safety gate made of glass and metal frames is shown in a factory setting. The gate is partially open, revealing a conveyor belt system with several cardboard boxes. Multiple horizontal red laser lines are visible across the gate, indicating a safety sensor system. The background shows the complex steel structure of a large industrial building with many lights.

# Safety fence

## FLEXIBLE ALUMINUM SYSTEM

A modular aluminum fence system that can be individually adapted to customer wishes and needs and that is open to future expansion.

- **Flexible** - Fence guide, shapes and cutouts
- **Adjustable** - Easy assembly and sliding components
- **Uncomplicated** - No drilling thanks to the Fast Connect System
- **Cost-effective** - Functional systems and standard fields
- **Expandable** - Large selection of attachment parts

# The SSP Safety Fence System

---

## Aluminum profile

Anodized 44 x 44 mm profiles with an 11 mm groove form the basis of the SSP safety fence system. Other matching profile sizes can be easily combined with each other. Due to the special design, the profiles are light but still stable.

## Slot nuts

The basis of the SSP Fast Connect technology are the slot nuts. They position themselves in the groove when screwed in and allow fast assembly.

## Fitting technology

The combination of fittings and slot nuts enables uncomplicated connection of the individual aluminum profiles. Drilling and thread cutting is not necessary. L, T and I fittings ensure stable and flexible mounting of aluminum profiles.

## Fillings

Wide range of fillings made of different materials for safety and functionality. From spot welding grid to transparent polycarbonate and opaque sheet metal to special fillings such as fine real glass.

### **Grid fixation**

The SSP grid fixation ensures a solid connection between the profile and the filler. It increases the total stability of the safety fence.

### **Clamping strips**

Polycarbonate, sheet metal or real glass fillings are additionally fixed with clamping strips. This stabilizes the connection and reduces vibrations.

### **Floor attachment**

The combination of floor attachment bracket and aluminum profile compensates for any unevenness. The floor angles can be mounted at different heights. Expansion anchors provide a firm hold in the floor.

# Safety Fence

## Warehouse Logistics

Uncomplicated and cost-effective solutions for large-scale storage and logistics facilities.

## Harsh environments

Even under harsh environmental conditions, the SSP safety fence can be used individually.

## Product Presentation

Scan the QR code  
and watch our  
video on YouTube!

## Robot protection

Stable spot welding grid with reinforcing fixation technology and robust aluminum profiles. SSP safety fences are regularly tested using pendulum and ballistic tests.

## Transparency

Thanks to polycarbonate fillings, the machines stay perfectly visible and provide not only grip guard and protection, but also good-looking machine safety.

# Application Areas

## Conveyor technology

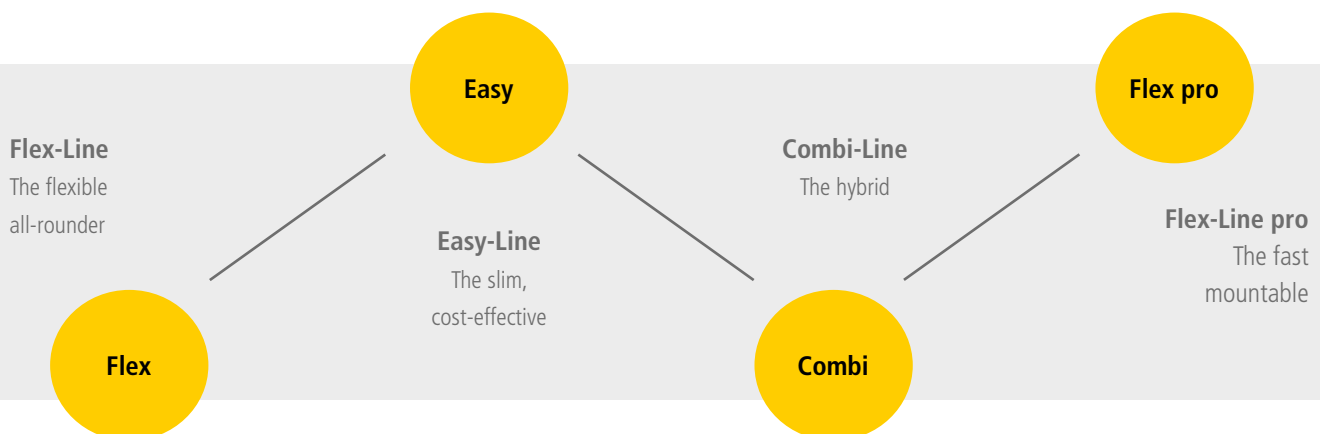

Requirements for construction heights and openings can be flexibly implemented.

## Automotive

The SSP safety fence system reliably meets the requirements of automated production in the automotive industry.

## Machine enclosure

The SSP safety fence system is suitable for simple fence sections, for complex machine enclosures and for the enclosures of robotic installations, machines and manual workstations.

## Individual

The route of the fence follows the route of the machine and the application. Angles, slopes, fillings and much more can be customized with the Flex-Line model.

# Wireless Safety

## DECENTRALIZED SAFETY SYSTEM

The Simplifier system can monitor, evaluate and switch off via the integrated wireless interface. Pushbuttons, emergency stop buttons and connection options for safety sensors enable flexible use.

- Decentralized design
- Simplification of diagnosis
- Combined functions in one housing
- Flexible and expandable inputs and outputs
- Reduced wiring effort
- Plug & Play standard units

# Safety Simplifier

## Central & Decentralized Safety Controller

The Safety Simplifier is a highly flexible safety controller that can be used either centrally or decentrally.

Thanks to wireless communication, the wiring effort is radically reduced. Up to 16 Safety Simplifiers can be linked via the secure wireless network.

This reduction in cabling saves resources and time in planning, documentation, setup and commissioning. There is no need for a control cabinet for the safety technology.

The flexibly configurable inputs and outputs of each Safety Simplifier facilitate the creation of safety systems.

Due to the multi-master principle, each communicating Simplifier is also a repeater. This principle creates a secure mesh network in which each Safety Simplifier shares its global information with all participants within its range.

Spring-loaded terminals secure the connections also in case of strong vibrations

4 relays for 2 × double-safety outputs (optional)

Memory card with application software for easy exchange

USB interface for programming and diagnosis

Feed-through to the control cabinet

14 I/O's as safety inputs or redundant OSSD outputs

Safe wireless interface (optional)

Safe CAN interface (optional)

- ✓ The flexible and safe solution for decentralized applications
- ✓ high safety up to SIL3 - PLe - Category 4
- ✓ 16 safe inputs and outputs can be configured flexibly and individually
- ✓ Predefined functional modules for easy and fast programming

# Reduced wiring effort thanks to wireless communication

## Not every decentralized structure of a safety system reduces wiring effort

# in a decentralized safety system

## ices the wiring effort

# Free Software

## Clear program structures

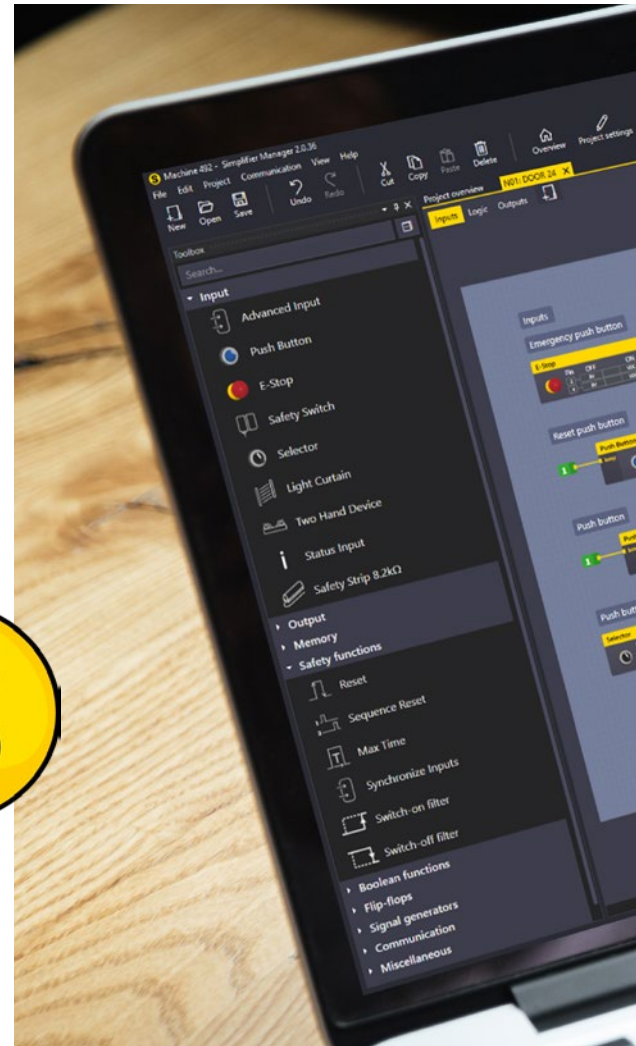

Predefined logic and functional modules as well as drag & drop functions simplify the programming.

## Free software gateways

Functional modules for communication with the standard PLC via free software gateways.

## Wireless program transfer and diagnosis

Thanks to the wireless function, programming can be transferred to the Simplifier without cable restrictions and diagnosis can be performed in online mode.

# Simplifier Manager

PROJECT  
REPORT

## Import and export function of program parts

Standardization of programs with the import and export function. Simplifier standard units with prepared programs and E-Plan macros.

## Optimized software validation

Individual checksums for each sub-page of the application software facilitate the validation process.

## Online diagnosis

Online diagnosis via the wireless safety interface. Furthermore, the program can be simulated and tested offline.

we simplify safety

# The best of two worlds

## Wireless safety meets safe bus systems

The Simplifier system is a versatile solution for various safety applications. With wireless communication and the integration of the PROFI-safe bus, it enables the protection of doors, drawers, lift gates and more. Easy installation, seamless integration and flexible customization make it the ideal choice. A Simplifier Gateway can network up to 32 Simplifier devices with the Siemens control system via PROFI-safe.

- ✓ A wide variety of safety functions can be integrated independently of the system
- ✓ Less planning and design work thanks to plug & play and slimline design
- ✓ Programming of all safety functions directly and centrally in the Siemens control system
- ✓ Low cabling effort thanks to secure wireless communication or CAN communication
- ✓ Modular and expandable - for safety switches, safety light curtains, I/O modules, push-button boxes, etc.

## ATTACHMENTS ACCESS PROTECTION

State-of-the-art technology in products for monitoring of safety doors on machines, plants and robots. They are suitable for a wide range of applications and protect people and machines.

- RFID safety sensors
- Process locks
- **Safety switch**
- Key transfer system

# SAFIX

## Non-contact RFID safety sensor

### Connections

5 m cable / 10 m cable  
or pigtail cable M12 8-pin

### High protection class

IP 67 - IP 69K

### Compact design

22 mm hole spacing  
36 mm width

### Technology

Most modern RFID sensors

### Extended LED diagnosis

both sides

### Switching distance

12 mm, also sideways

IP69K

### Wide range of safety applications

- ✓ PLe acc. to EN ISO 13849-1
- ✓ High coded acc. to EN ISO 14119 (version SAFIX I and W)
- ✓ Series connection of up to 30 sensors without safety loss
- ✓ Reaction time of only 75 ms
- ✓ EDM input to monitor contactor and start buttons

### Flexible in assembly and wiring

- ✓ High protection class IP67 and IP69K for use in rough environments, according to ECOLAB
- ✓ Flexible connection concept with passive junction box XCONN or wireless distributor Safety Simplifier
- ✓ Connections via 5 m and 10 m cable or M12 pigtail connection
- ✓ Extended LED diagnosis

## EXCERPT FROM EN ISO 14119

### 5.2 Arrangement and installation of position switches

Position switches must be arranged in such a way that they are adequately protected against any change in their position. To achieve this, the following requirements must be met:

- a) the fastening elements of the position switches must be reliable and a tool must be required to loosen them.

If it is stated in the risk assessment that the safety switch must be prevented from loosening (EN ISO 14119), the screw covers supplied are a possibility to omit the safety screws. For subsequent opening of the screws, the cover must be opened with a special tool.

With screw cover

Connected in series

Flat actuator SAFIX T6

# HOLDX R

## The smart process interlock

**The new generation of magnetic process guard lockings - Award winners, innovative and intelligent.**

The HOLDX R series cleverly combines a secure non-contact RFID safety sensor with an intelligent electromagnet in a single device. With this combination of safe position monitoring and process guard locking, the HOLDX R is universally applicable and ensures increasing quality as well as less downtime and set-up times.

### Two designs for your application

#### **HOLDX RS**

In its small and compact design, the HOLDX RS enables a locking force of 600 N. In addition to the locking force of the electromagnet, the movably supported anchor plate has a 50 N permanent magnet which prevents a door from instant opening.

#### **HOLDX RL**

Ideal for large doors. Thanks to the locking force of 1200 N, the HOLDX RL prevents doors from tearing open. With a slim width of only 35 mm, the guard locking is ideal for space-saving installation on aluminum profile systems. Like the HOLDX RS, the guard locking has also has a permanent magnet of 50 N, which prevents a door from opening.

# HOLDX R1 Standard

**Intelligent - innovative - safe**

## Flexible

Movable anchor plate

## Magnetic force

500 N locking force version S  
1200 N locking force version L  
50 N permanent magnet

## Smart downtime monitoring

by magnetic flux measurement

## Compact design

mounting on aluminum profiles  
from 35 mm construction width

## LED diagnosis

extended status display

## Non-contact safety RFID switch

acc. to PLe EN ISO 13849-1

## High coded

2 coding levels acc. to EN 14119  
standard/individual coding

## Connection

flexible pigtail cable  
M12 8-pin or  
M12 12-pin

we simplify safety

# Network HOLDX R2

UP TO 30  
IN SERIES

## Reduction of commissioning time

Thanks to the two existing pigtail connections, Y-distributors and terminal boxes are no longer necessary. The HOLDX R cables are simply looped through from process lock to process lock. Thanks to an intelligent and simple wiring concept, up to 30 HOLDX R2 can be easily connected in series without giving up the diagnosis options. With the free software gateways from SSP, all participants can be individually evaluated and controlled.

## Advantages of intelligent series connection

- ✓ Series connection of up to 30 process locks up to PLe according to EN ISO 13849-1
- ✓ Up to 170 diagnostic information are available in the system with series connection
- ✓ Each process lock can be controlled individually
- ✓ Evaluation of diagnostics on the standard - PLC without gateway
- ✓ Functional modules for Siemens / Beckhoff / Rockwell / B&R available on the homepage for evaluation of diagnostics
- ✓ Wireless transmission of safe and non-safe diagnostic information even with series connection via the wireless Safety Simplifier safety controller

**75 ms  
RESPONSE  
TIME**

## Advantages in the application

- ✓ Ple acc. to EN ISO 13849-1:2016
- ✓ High coded acc. to EN ISO 14119:2013
- ✓ Wear-free process guard locking
- ✓ Response time only 75 ms
- ✓ High protection class , IP67 for use in harsh environments
- ✓ Extended diagnostic options thanks to Bluetooth interface and HOLDX Manager software
- ✓ One diagnostic output provides up to 17 messages
- ✓ Functional modules for evaluation of the diagnosis are available for Siemens, Beckhoff and Rockwell

## Advantages of Bluetooth diagnosis

- ✓ Has a guard locking been manipulated (wrong actuator)?
- ✓ How often a new actuator has been trained?
- ✓ How often was a door torn open even though it was locked?
- ✓ Storage of valuable information such as:
  - Short circuit
  - Loose contact in the cable
  - Wrong actuator
  - Voltage fluctuation
  - B10D-value of downstream actuators

**we simplify safety**

# XCONN

## Passive distributor for easy wiring

- ✓ Connection of up to six SAFIX safety sensor with RFID technology
- ✓ Connection of up to six HOLDX process guard locking devices
- ✓ Release of all process guard locking devices can be set individually
- ✓ Connection of up to six EDI emergency stop buttons

XCONN Y-M12 Y-distributor

# SSP safety relays

## User-friendly and flexible

UNDER 10 ms  
RESPONSE  
TIME

Series S2

Series T2

Series X2

Pluggable connection  
technology with coding

Rotary switch for  
function setting

### User-friendly

- ✓ Selectable up to 16 different applications
- ✓ Monitoring of all common safety sensors
- ✓ Achievable safety level up to PL e / SIL 3
- ✓ elected application can be secured with a seal
- ✓ Short response times (< 10 ms) on request
- ✓ High switching capacities and short cycle times

### Flexible in application

- ✓ One of the two-channel monitoring of sensors
- ✓ Manual or automatic reset
- ✓ Monitoring of potential-free signals
- ✓ Stop Category 0 and 1
- ✓ Monitoring of OSSD signals
- ✓ Use as a contact extension or as a fully-fledged safety relay

we simplify safety

## Enabling and operational unit

Important legal regulations must be observed for work such as commissioning, maintenance, servicing or setting up processes in special operating mode.

The enabling mode has proven effective. In this operating mode, the machine operator has the option to bypass certain safety devices, such as safety doors, by selecting the operating mode and actuating the enabling unit. The important point here is the 3-level function.

Only in the middle position, the 3-step enabling switch allows certain hazardous movements. If the operator releases the enabling switch or pushes it into the Level 3, the system switches off for safety.

### Reliable protection against manipulation

The operator terminal can be used to control up to 120 binary-coded functions, such as axes, valves or grippers. The 7-segment display shows the selected function and in this way facilitates the operation of the controlled function type. The extended LED diagnosis also provides extended status information.

The in-hand sensor offers a clear advantage in terms of protection against manipulation. Thanks to its ability to detect the user's hand, it reliably protects against bypassing. Therefore, manipulations by clamping the enabling switch are impossible. ZEUS detects via activity sensor when it is removed from the support bracket. Only then it is switched into the special operating mode. This makes sure that no unwanted operation errors occur.

- ✓ Ergonomic design
- ✓ Robust housing in IP67
- ✓ Modular design
- ✓ Combination of enabling switch and operational unit
- ✓ Operation of up to 61 axes/functions
- ✓ Increased protection against manipulation thanks to SSP hand detection
- ✓ Universal connection via plug, cable or terminal

Emergency stop button  
integrated in the control unit

Home sensor

Flexible cable length allows clear view during  
enabling operation

**Product configurator**

## Emergency stop button

### Self-monitoring contact blocks

In order to maintain safety, the switch elements of the emergency stop/emergency off buttons are equipped with a safety contact. The contact supervises continuously the correct connection between the emergency stop/emergency off button and the contact element. Even redundant, safe emergency-off chains are ineffective unless the contact block is accurately connected with the emergency off button.

If the emergency stop/emergency off button is disconnected from the contact element as a result of an imperfect assembly or mechanical damage, the safety contact disconnects immediately and the machine shuts down. The machine can be restarted only after successful trouble shooting.

EDI A3B illuminated emergency stop button

IP69K for extreme operating conditions

IP69K

# Operating elements

## Operating elements for all applications

The SSP control elements can be used in a wide range of applications, from the simplest to the most demanding environments requiring ECOLAB and IP69K certifications. With compact housing dimensions of less than 40 mm, the operating elements of the EDI series, such as the tGard series, can be easily mounted on standard aluminum profile systems. Numerous individual designs and button configurations can be realized with Fortress switches and thus adapt to different application conditions.

## EDI

### EDI emergency stop button and operational units

Narrow housing shapes with holding brackets for quick assembly.
